Abstract (en)

[origin: WO0033247A1] Disclosed is a portable microprocessor-assisted data carrier that can be operated with or without contacts. At least one data-transmission specific access condition is stored in the portable data carrier for at least one area of a memory. Said access condition defines the condition for access to specific areas of a memory according to the type of data transmission (with or without contacts) between the portable data carrier and a data input/output device.
