Abstract (en)

A flexible package (10) includes a recloseable zipper closure (11) along the mouth of the package for selective opening and closing of the mouth. The zipper closure includes first and second closure profiles (12,14), which are configured and constructed to selectively interlock. A slider device (16) is configured and constructed to facilitate the mating (closing) and unmating (opening) of the zipper closure. A tamper evident peelable seal (50) is provided between the zipper closure and the interior (25) of the bag to indicate whether or not an attempt has been made to access the interior of the package. The peelable seal can extend between the package walls, one package wall and one closure profile, or between first and second closure profiles. <IMAGE>
