Abstract (en)  
[origin: EP1054123A1] The pin (1) on the door handle connects the handle to a catch or bolt of an anti-panic door lock. There is a two-part polygo (2a,2b) and a shaft (3) to connect the two parts together. There is a thin inwardly connecting free bar (4), with an enlarged portion with a male thread (5). One of the parts (2b) of the polygon has a through-bore with a female thread (6), the length of which is smaller than that o the free bar on the shaft. The threaded portion of the shaft may pass all the way through the bore.
