Abstract (en)
[origin: EP1054373A2] The object of the invention is a display apparatus comprising a display and, connected to the display (3), a base part which forms a support surface for supporting the display apparatus on a substantially planar surface. The display apparatus is characterised in that the display (3) and the base part can be moved in relation to each other, at least to a first operating position and to a second operating position, of which in the first operating position the direction of the support surface differs substantially 90 degrees from the direction of the support surface in the second operating position, and further the base part of the display apparatus comprises fastening means for fastening the display apparatus to a substantially planar surface. <IMAGE> <IMAGE>
