Abstract (en)
[origin: DE19806020A1] Shaker for liquids, especially dairy products such as half-and-half cream and milk. In existing shakers the cocktails are mixed by pouring the different liquids into the bowl (2), into which a sifter is inserted that is filled with solids such as ice, lemon slices or cocoa. By shaking said shaker along its longitudinal axis, the ingredients of the cocktails are finely and thoroughly mixed but it is not possible to whip the liquids. The new shaker (1) makes it possible to whip liquid foodstuffs, especially milk, by simply shaking them. The shaker (1) is designed for whipping in that a separation sifter (4) is arranged in a substantially transversal position in relation to the vertical axis of the shaker so that the entire volume of the closed bowl is subdivided by the separation sifter in a ratio of 2:1. The shaker is particularly suitable for preparing cappuccino cream.
