Abstract (en)

[origin: EP0858952A1] The container is roughly rectangular with rounded ends, a screw closure, and a ventilating pipe leading into the container's interior. The top of the container has a hollow carrying-handle which at the same time serves as ventilation pipe. One end of the hollow carrying-handle is connected to the interior of the container. The other end is in the form of an open pipe ending inside the screw closure piece. The handle is fixed to the container at a point possessing reinforcement ridges. The underside of the container has recesses fitting over the handle and ridges when stacked.
