Abstract (en)
[origin: WO9941444A1] Folding ironing board (1), especially a domestic ironing board, comprising an ironing board table (5), a supporting frame having leg elements (11, 13) which can be swivelled between a folded and an unfolded position, a locking mechanism for locking the position of the ironing board table in the unfolded position and at a safe working height above a floor and comprising a first locking element (17) connected to the ironing board table as well as a second locking element which can be moved relative to the said first locking element and interacts with one of the leg elements (13), and a control member (31) for unlocking the adjusting mechanism, which control member can be moved by a user manually from a locking position into an unlocking position. The control member can be jammed in the locking position. The control member (33) can be jammed in the locking positions. The control member can comprise a control handle (31) and the underside of the ironing board table (5) and can be moved counter to spring force in the direction of the bottom edge of the ironing board table and a jamming member can be present which is manually displaceable into a jamming position in which the space between the control handle and the underside of the ironing board table is locally, in any event partially, filled, so that a movement of the control handle counter to spring force in the direction of the bottom edge of the ironing board table is prevented to such an extent that the locking mechanism is prevented from being unlocked.
