Abstract (en)
[origin: WO9941473A1] A multiple peak tent (1) structure which is mechanically simple and easy to assemble. The tent structure of this invention can span relatively large areas without inhibiting mobility under the tent through the use of ground extending support poles. The canopy (3) of the multiple peak tent (1) structure is supported by multiple masts (8) resting on a cable network (11). The cable network (11) is attached to the upper corners of the frame structure resulting in a tent having no supporting poles that extend to the ground in the covered area. The multiple peak tent (1) structure may be expanded modularly to span larger areas.
