Abstract (en)

[origin: GB2334297A] A pivotally mounted claw 50 holds a door 10 in a closed position while acted upon by first and second pawls 44,42. The first pawl is movable from a claw retaining position (Fig.3) to a releasing position (Fig.5) by the action of a controlled electric motor 5. The first pawl provides not only latching of the door, but also locking of the door when the motor controller is switched to a locked condition.
