Abstract (en)
[origin: WO9935542A1] The invention concerns a digital display watch comprising at least two coaxial ring-shaped indicator disks (11, 12), driven in rotation of their common axis by a clock watch movement (20), said disks and said clock watch movement being housed in a case (2, 3, 4, 6, 9) having at least one aperture (1) running right through it in the axis direction. The invention is characterised in that said ring-shaped disks (11, 12) are arranged in a common plane, the outer disk (12) displaying minutes, being driven by means of a pinion (16) co-operating with teeth on the external periphery of said outer disk, and the inner disk (11) displaying hours, being driven by means of a pinion (14) co-operating with teeth on the internal periphery of said inner disk.
