Abstract (en)

[origin: EP1055385A1] Device for supporting and controlling a curtain (20), comprising: a guide element (12), a plurality of support members (14,16) which are slidable along the guide element (12), to which the upper edge (18) of a curtain (20) is intended to be connected, an endless flexible control member (22) cooperating with at least one of said support members (14), an electric motor (28) arranged for driving the endless flexible control member (22) for moving a vertical edge (32) of the curtain (20) in the direction of said guide element (12), and manually operable control means for activating said motor (28). Said control means comprise an auxiliary control device (40) adapted to detect the movement of said vertical edge (22) of the curtain (20) from a rest position and adapted to activate the motor (28) in the opening or closing direction of the curtain (20) depending on whether the movement of the edge of the curtain (20) is directed in the opening or closing direction of the curtain (20). <IMAGE>
