Abstract (en)
A method and an apparatus for providing a roofing on a roof of a building, whereby a layer of insulating material (2) is provided on the roof surface (3) and then a watertight covering layer (1) is provided on the layer of insulating material (2), whereby as watertight layer (1) at least one covering layer consisting of plastic material is used; in the covering layer openings (7) are cut at regular intervals with a cutting tool (30) suitable for the purpose; subsequently, via the resulting openings, screws (20) are screwed into the insulating material (2), which screws (20) are made of plastic, have a shank with a very coarse screw thread (21) and a thin disk-shaped head (23), the diameter of which is larger than that of the openings (7) in the covering layer (1), and which is provided with engagement (24) means for a screw-in tool. <IMAGE>
