Abstract (en)  
[origin: EP1055790A2] The slide rails (9,10) are actuated by top (11) and/or bottom (12) levers having two arms (13,14) in U form joined by crossb and arranged to pivot via horizontal frame bolt (16). Arm (13) edge bears on a reversible cam (8) as keyed crossways onto an actuator shaft (7) coupled to a swivel arm (3,4). The far edge of the arm (13) opposite the first edge can be contacted with the cross part (19) of the frame (5) at the end of the arm (13) swivel movement as initiated by bar (2) depression towards the door thus opening the lock. Arm (14) on the other hand has a radial tip which rides with play in a rail (9,10) slotway. The crossbar the frame (5) uses a third edge contacting a pin extending from the top or bottom edges of the general bolt (20).
