Abstract (en)  
[origin: US6390799B1] The invention relates to a calibrated cutting device for slicing foodstuffs that are suitable for cutting, more particularly meat products. Said device has the following characteristics: a base frame (1) is provided; a shaping tube (55) is also provided, through which the food product that is to be sliced is moved forward in the direction of a calibrated cavity (49); the calibrated shaping cavity (49) is a separate constructive unit different from the shaping tube (49); a knife arrangement (65) moving lengthwise is provided between the feed hole (31) of the calibrated shaping cavity (49) and the adjacent delivery hole (63) of the shaping tube (55), which is arranged between the calibrated cavity (49) and the shaping tube (55); a clamping unit (13) is also provided. The shaping tube (55) and the calibrated shaping cavity (49) can be pressed together by means of the clamping device (13) in order to achieve a negative pressure on the shaping tube (55) through the calibrated shaping cavity (49).
