Abstract (en)

[origin: WO0035701A1] A system for energy recovery in electric fans of car radiators, which comprises at least one power supply (B), which is connected to an electronic control device (CM), operated by a pilot electronic-box (CC) and coupled to an electric machine (M), able to start at least one cooling fan (V); a pilot circuit being placed between said electronic control device (CM) and said electric machine (M) so that the electric machine (M) may be configured like a motor for the fan or like a controlled generator operated by the fan itself, said electric machine (M) being controlled by an application program for computers able to control the electric machine (M) in function of sizes or parameters inside the system and/or commands outside the system.
