Abstract (en)

[origin: WO9943836A1] Banana Streak Virus (BSV) genome has been cloned and the promoter identified. Operable linkage of the promoter to a transcribable sequence allows for transgenic expression in plants, including non-graminaceous monocots particularly Musaceae (Musa and Ensete) and graminaceous monocots such as rice and sugar cane. Methods for detection of BSV infection in plants are also provided.
