Abstract (en)

[origin: US6503339B1] The invention relates to a method to produce non-grain-oriented magnetic steel sheet made of thin-slab or slab casting with low specific total loss and high polarisation and favourable mechanical properties. It is a characteristic of the invention that the steel slabs are hot rolled either directly from the casting heat or after a reheating to $T \geq 900$ ° C. and two or more metal forming passes are performed in the two-phase region austenite/ferrite in the course of finishing rolling.
