Abstract (en)
[origin: FR2775010A1] The invention concerns an autonomous strip laying device (1), in particular for marking the ground, consisting essentially of a rolling frame supporting a reel (11) of strip (2) to be unwound, a strip unwinding assembly (19), means for applying (34) the strip (2) on the ground comprising an applicator roll (33), a device for sectioning (29) the strip and an assembly driving the frame and actuating the different devices and the unwinding means. The invention is characterised in that said assembly unwinding (19) the strip (2) and said means applying (34) the strip (2) are, at least during the unwinding and laying of the strip (2), mutually synchronised in rotation by synchronising means (21", 22", 23", 26, 26', 27", 31", 32", 33", 35, 38).
