Abstract (en)
[origin: WO9941476A1] The invention relates to an actuation device, e.g. for a door lock. Said device can be actuated by a control unit (18) that can be controlled by a transponder read device (11) which is connected to a magnetic signal evaluation unit (16). The transponder read device generates the signals corresponding to a magnetic card read head for controlling the magnetic signal evaluation unit (16).
