Abstract (en)
[origin: WO9941807A1] The present invention relates to a femal electrical connection terminal consisting of a one-piece contact (10), made of cut and bent sheet, comprising a rear shank for permanent connection to a conductor and a front body having a base of rectangular cross section, the two opposed faces of which are extended forwards by contact blades (18) which converge, and of a protective cage of rectangular cross section which surrounds the body. The cage (30) has inwardly projecting means (40) which limit the extent to which the contact slades (18) come together and which keep them prestressed.
