Abstract (en)
There is described a book comprising a predetermined number of pages (2) of a thickness preferably higher than 0.5 mm put into mutual-superposition relationship and in engagement with each other at least at a binding region (3). The book has a first and a second series of pages (5, 6) extending on opposite sides of the book itself so that each of them is increasingly smaller, in plan view, than the more internal page with reference to the book extension. At least one first graphic motif (11) is reproduced on the covers and it continues with portions (11a) complementary thereto, provided on perimetral bands (9) defined on each of the first and second series pages so that, looking at the subject book from both sides, a marked tridimensional character can be recognized. <IMAGE>
