Abstract (en)

[origin: EP1057966A1] The end rail (1), at a distance away from its two ends, is fixed to a winder-band (19), with a locking member each (13,14) tensioned by springs (16). When the end rail is in its lowest end position, it cooperates with a counter element (26) preventing the end rail from sliding upwards. Each winder band leads over a deflector element (23) fixed to the end rail. Both sides of the end rail are guided by sleeves (7) in vertical profiles (9). The locking elements comprise bolts sliding inside the sleeves.
