Abstract (en)
[origin: EP1058160A2] A rotation stabilizing device of the invention has therein a rotary member (3) which rotates around the central rotation axis, an inertia member (6) which is arranged at the position different from that for the rotary member in terms of the axial direction of the central rotation axis, and a connecting member (8) which is provided with a viscoelastic member having viscosity and elasticity and connects the rotary member and the inertia member in a detachable manner through the viscoelastic member, and is characterized in that the connecting member is provided at the position which is away from the central rotation axis in the radial direction. <IMAGE>
