Abstract (en)
[origin: WO9944880A1] A shock absorbing wheel suspension apparatus includes an upper rocker arm (6) and a lower rocker arm (8) pivotally attached to a bicycle frame (3) with rear shock stays (9) pivotally attached to one end of the upper and lower rocker arms. A shock absorbing element (J) is connected to the opposite ends of the upper and lower rocker arms. This arrangement increases performance by aligning forces for various loading conditions.
