Abstract (en)

[origin: DE19860765A1] The invention relates to a housing (11; 11a), especially for a packaging machine (10; 10a), in whose lateral walls (20; 20a), guides (21, 22; 60, 61) are configured for at least one protection window (25; 62, 63). The at least one protection window (25; 62, 63) is mounted in the guides (21, 22; 60, 61) by means of rollers (54; 76, 77, 82). The inventive housing is characterized in that the protection window (25; 62, 63) can be displaced in the guides (21, 22; 60, 61) in such a manner that a free accessibility to an area (18; 18a) located inside the housing (11, 11a) is made possible, whereby an opening of the housing (11; 11a) does not increase the space requirements of the packing machine (10; 10a).
