Abstract (en)

[origin: WO9944898A2] A carton and blank for forming a carton for beverage containers which carton includes a series of hinged panels forming a sleeve and end closure panels hinged to at least one associated hinged panel for closing, at least in part, the opposite ends of a sleeve. The said carton includes handle means by which the carton can be carried, said handle means comprising a strap connected to opposed end panels having a user part which is in substantially co-planar relationship with said one hinged panel when in a stored condition. The strap is so connected at its opposite ends to said end closure panels as to provide a surplus of material to enable said user part to be brought into a position of use. The invention further comprises a carton for holding a plurality of articles in a group, which carton comprising top, opposed side walls and a base, hingeably interconnected together to form a tubular structure wherein at least one said side walls comprises a displaceable zone arranged to protrude out of the plane of the side wall to accommodate a portion of an adjacent article. The displaceable zone comprises a multiplicity of connected sections each occupying a different plane to a next adjacent section.
