Abstract (en)

[origin: DE19807702A1] The system contains a fuel distributor (2) to supply fuel to injection valves via valve intakes (3). The damper element has an elastic tubular body (1) located in the distributor. The tubular body separates an inner fuel chamber (1a) with fuel flowing through it, from an outer chamber (2a), which is connected to the fuel intakes and also has fuels flowing through it. The wall of the tubular body is of an elastic material, e.g. rubber, plastic, and/or an elastic fluid-proof fabric. The inner chamber is positioned upstream of a pressure regulator (6).
