Abstract (en)

[origin: FR2787946A1] The invention concerns a device for controlling the power supply of an electric motor (M) of a vehicle, particularly a motor vehicle, starter (D), comprising a power switch (K) mounted in series with said electric motor (M), means (2, B) for controlling said power switch (K), and an auxiliary switch (T2) which shorts out said electric motor when the power switch opens. The invention is characterised in that said auxiliary switch is a static electronic component (T2).
