Abstract (en)
[origin: EP1059240A1] The two stacking cases (1) are each fitted in their opposing side faces (7, 8) with interacting locking means (47, 48) so that two cases seated directly on each other detachably form one unit. The locking means are set on two opposite side faces at the centre of gravity of each case with the first or second locking means formed as rotary locks with coaxial rotary axes. The first and second locking means of each case can be set at different levels. The carrying handles (17) can be fixed on the case by the rotary locking means.
