Abstract (en)

[origin: EP1059259A2] The device has guide tongues (6) projecting into grooves (14) of the cylinder (3) and forming with brake tongues (5) a gap (X) in which brake segments (7) project to brake the products as they pass. The depth of projection of the brake segments is adjustable in order to vary the brake action. The brake segments are mounted on a shaft (17) which can swivel automatically or semi-automatically by a setting device (25) so that the segments swivel in the gap.
