Abstract (en)  
The channel (1), intended for installing in the ground in order to collect rainwater or other liquids, is completed with a top-closing cover or grating (11) mounted on the former in a hinged manner, there being formed in the upper part of one of the channel (1) sides, a housing (9) for hinges (10) of the grating (11), housing (9) having a partly closed opening (8) for the purpose of permitting the mounting and dismounting of the grating (11) with respect to the channel (1) to be done solely with the former in the upright position, its dismounting being impossible in any other position. The housing (9) for the hinges (10) of the grating (11) is defined between the finishing piece (2) and a piece (5) fixed internally to said finishing piece (2). On the edge opposite the hinge, the grating (11) has a through-hole for holding a latch pin for locking said grating in the closed position. <IMAGE>
