Abstract (en)

[origin: EP1059619A2] Value and security product, e.g. banknote or ID card, has an embedded security element which has electroluminescent properties and by exciting in an electromagnetic alternating field radiation is emitted. The novelty is that electroluminescent substances (5) are embedded into the printing inks to print the security document (1). Also claimed are: (a) a testing device for testing visually and/or by machine security documents; and (b) production of a security document.
