Abstract (en)
[origin: GB2334906A] A process for producing laminated metal strip which comprises the steps of chemically treating the strip to form on at least one of its surfaces a non-metallic coating, and applying to that coated surface a coating of a thermoplastic resin to form a layer thereon. The first coating is preferably corrosion resistant and promotes adhesion with the thermoplastic resin. Preferably the non-metallic coating layer is a phosphate, chromate, oxalate, arsenate, a 2 component polymer, a combination of chromium, silicon and an organic active species, or silanes or azoles. Preferably the thermoplastic resin is polypropylene, polyethyleneterephthalate or a mixture thereof.
