Abstract (en)

[origin: WO9937578A1] The invention describes a chilled dispenser unit (6) for use with existing beverage dispensing apparatus in a bar and comprises a coolant filled container which is mounted adjacent to the bar counter. A plurality of beverage lines (3) are taken from a primary cooling means to the bar counter in a python (1). The beverage lines and water core of the python are incorporated into the unit (6) so that the chilled beverage lines (3) are not exposed to the ambient temperature prior to being dispensed from the dispensing taps (5).
