Abstract (en)

[origin: WO9940072A1] The invention relates to new five-membered, heterocyclic condensed benzoderivatives of the general formula (I), in which Ra to Rc, A, Ar, X and Y have the meanings assigned in claim 1, and their tautomers, stereoisomers, mixtures and salts, especially their physiologically compatible salts with inorganic or organic acids or bases, which have valuable properties. The compounds of the general formula (I) above, in which Rc is a cyano group, present valuable intermediate products for the production of the remaining compounds of the general formula (I), and the compounds of the above general formula (I), in which Rc is one of the following amidino groups, as well as their tautomers and stereoisomers, have valuable pharmacological properties, especially an antithrombotic activity.
