Abstract (en)

[origin: WO9943671A1] The present invention provides novel substituted aminoheteroaromatic isoxazoline derivatives of formula (I), wherein R₁ is H, alkyl, cycloalkyl, alkoxy, amino, or alkylamino; Y is H, F, or CH₃; W is O, or S; Ring P is a 5-membered heteroaromatic moiety having one to three atoms selected from the group consisting of sulfur, nitrogen and oxygen atoms, wherein the 5-membered heteroaromatic moiety can additionally have a fused-on benzene or naphthyl, a 6-membered heteroaromatic moiety having at least one nitrogen atom, wherein the 6-membered heteroaromatic moiety can additionally have a fused-on benzene, naphthyl or 5-membered heteroaromatic moiety having one to three atoms selected from the group consisting of sulfur, nitrogen and oxygen atoms; Q is a 4-, 5-, 6-, 7-, or 9-membered heterocyclic moiety containing one or more nitrogen, sulfur and/or oxygen. The compounds of the invention have high antimicrobial activity for preventing and treating infectious diseases.
