Abstract (en)
[origin: EP1060773A2] Trailer (1) has a hay rake and baler driven by chassis and wheels (15) via a friction gear (12,13). The trailer (1) has a driven rotating hay collector rake and/or a transporter (6) for imaginary hay bales (8). The rake and/or bales are driven via ribbed or toothed spur or friction gears (12,13), by the trailer chassis and/or the wheels (15) associated with the rake. Each wheel has a ring chamber on the inside between hub and rim, to accommodate a friction wheel. This is connected to the shaft of the hay rake and is in friction contact with the surface of the hub.
