Abstract (en)
[origin: EP1061028A2] The pneumatic guide has an air conducting body (1) adjustable corresponding to the printed matter format working in conjunction with an air producer (6), which is adjustable by a control unit designed as a computer (7). A signal corresponding to a format dependent adjustment of the air conducting body is supplied to the computer, so that as a result, the computer adjusts the conveying power of the air producer, corresponding to the signals received.
