Abstract (en)

[origin: EP1061188A1] The inflow section has a ring-shaped protrusion acting as a slide bearing for supporting it on top of the central connection in the overflow section (2) for receiving the actuator shaft operating the outflow valve (5). A screw is passed through the ring to secure the inflow section to the connection. The overflow section located on the outside of the bathtub (6) includes a central connection for receiving an actuator shaft from a rose for a Bowden cable connected to an outflow valve (5). The inflow section is connected to the overflow section and supported against the inside wall of the bathtub via a seal.
