Abstract (en)  
[origin: EP1061194A2] A profiled strip is used as the clamping profile (31) engaging with the two panels or panes (3, 4). The strip is clamped against the spacer element (21) between the two panels or panes via two seals (24, 25) to form a layer construction. The mounting (1) comprises a basis profile (11) containing a screw channel (14) in a protruding seat section (13), joined to which is a hollow profile acting as a spacer element. A clamping profile covers both sides of the spacer element. Seals (16, 17) are pressed between the clamping and basis profiles.
