Abstract (en)
[origin: EP1061315A1] Refrigerated container has recorder (2) fitted to wall of container (1), temperature sensor (3) installed in container and connected to recorder so as to record values of temperature measured by sensor. Transmitter-receiver is connected to recorder to enable exchange of data with latter from outside of container, in particular to interrogate recorded temperature values and/or temperature variation during transport of containers. Independent claims are also included for (a) the set of containers, and for (b) the automatic management system of the set of containers.
