Abstract (en)
[origin: EP1061540A2] The movable contact arm (24) is coupled to a central carrier (33) that moves against a spring (29) when displaced by the input . This can be in the form of a rocker (16) . When moved the carrier moves the contact arm until the movable contact (23) engages a fixed one in the base and latches with a spring indent (34)
