Abstract (en)
[origin: DE19811421A1] The cleaning device has a housing that is inserted in the tank opening and having a fluid supply pipe and a nozzle holder (4) with four nozzles (8,9,10,11). Each pair of nozzles are set V-fashion at an acute angle (12) to each other with the two V-formations (13,14) pointing in opposite directions (15). The rotation of the nozzle holder about its first rotary axis and the nozzle assembly (6) about the second rotary axis (7) are mechanically linked at a fixed ratio to ensure repeat spray patterns.
