Abstract (en)

[origin: WO0041823A1] The invention relates to a hot rolling mill for thin strips and in particular the output section (1) thereof, i.e. that part comprised between the final rolling stand (2) and a winding reel (10). In this section, air jets blown by generators (5, 6) are used to prevent the strip (N) from being lifted from a rollers way (3) along which this strip is fed. The invention also comprises a device for measuring the planarity of the rolled strips.
