Abstract (en)  
[origin: DE19809859A1] The invention relates to a device for cooling gases, in which the gas can be fed through channels (5) of a cooling device (1). Adjacent to the channels (5) for the gas the cooling device (1) also has channels (10) for a circulating coolant. In said cooling device (1) the channels (10) for the coolant are positioned centrally inside and the channels (5) for the gas to be cooled are positioned radially on the outside.
