Abstract (en)
[origin: WO9949383A1] An electronic reading system (30, 31, 32) allows users to download book and other types of contents to a hand-held reader device (30) for viewing. Using software which runs on a personal computer (PC) (31), the user can download titles from Internet sites to the PC (31). Titles are then automatically transferred to the device when the device (30) is placed in a cradle (32) which is connected to the PC (31). Using the device's touch sensitive display (34) and graphical user interface, the user can access various software implemented features associated with the display and management content.
