Abstract (en)

[origin: WO9946823A1] The invention concerns a thermoelectric converter formed by transverse alternating wire sections (12, 14) made of two different electroconductive materials connected at their ends by longitudinal wire sections (16, 18) constituted by laying two longitudinal wires on the ends of the transverse sections (12, 14), soldering the longitudinal wires on the ends of the sections and cutting the longitudinal wires (16, 18). The invention simplifies the manufacture of converters formed by a plurality of series-connected thermocouples.
