Abstract (en)
[origin: EP1062862A1] A U shaped frame (1) has a towing connection (2) and side arms (5) which support a hydraulically rotatable cylindrical drum (3) and a cutting tool (13). The cutting tool abstracts silage under the control of a loader arm and deposits it into the drum through an orifice (6) with door (7). When the drum is full it is rotated hydraulically and an internal thread (9) first mixes and then ejects the material through a side door (10)
