Abstract (en)
[origin: EP1063096A2] An ink jet printer (10) for making photographic prints includes at least one paper supply (12, 12', 58, 58') for holding a supply of print paper and a sheet paper transport belt (30, 31) arranged to receive sheets of print paper (25) from the at least one paper supply and transport the sheets through the printer. A back printer (26) is located between the at least one paper supply and the paper transport belt for applying back prints to the print paper. A full print width color ink jet print head (36) located over a first portion of the transport belt (30) for printing an image on a paper sheet. A linear image sensor (46) located in front of the ink jet print head detects the edges of the paper sheet being transported under the print head and a controller (54) connected to the paper sensor generates a digital mask representing the area of the paper and applies the digital mask to a digital image being printed, thereby preventing overspill printing onto the belt. A paper dryer (48) is located over a second portion of the transport belt (31), the paper dryer including a source of flowing air (50) for drying the ink image on the paper. <IMAGE>
