Abstract (en)

[origin: EP1063281A2] A rinse aid composition that does not inhibit starch breakdown and a cleaning system using the same is described. The rinse aid composition comprises a surfactant which when contacted with a gelled azure starch that is subsequently retrograded and suspended in a detergent wash having a compound capable of causing starch degradation, does not prevent at least about 75% degradation of the suspended azure starch present in the detergent wash or the rinse aid composition does not result in a washed ceramic tile coated with a potato starch from displaying a % DELTA R of greater than about 24, or both.
